

Mudassir Abrar

Summer 2026 — 3-Month Cybersecurity & Build Roadmap

3 months	Full-grind break
10+ hrs/day	Daily commitment
13 projects	To vibe-code
10 HTB machines	Target
Beginner → Solid	Cyber level

Month 1	Foundations & First Blood	Linux · Networking · First CTF · First 2 Projects
---------	---------------------------	---

CYBER SKILLS - Linux command line mastery (bash, permissions, processes) - Networking: TCP/IP, DNS, HTTP/S, subnetting deep dive - Wireshark — packet capture & analysis - Nmap scanning & service enumeration - TryHackMe Pre-Security path (complete it) - TryHackMe SOC Level 1 path (start) - First 5 THM easy rooms solved	BUILD PROJECTS - Project 1 — Network Scanner Dashboard - Project 2 — AI Phishing Email Detector - Both pushed to GitHub with README + demo GIF - Set up VirtualBox / WSL2 home lab	TRENDY TO TRY - Finish Cisco Networking Basics (enrolled) - Finish Harvard CS50 Cybersecurity (enrolled) - Post first THM room writeup on LinkedIn - Follow: NetworkChuck, TCM Security on YouTube - Register for GitHub Student Developer Pack
--	---	--

Month 2	Offensive Basics + AI Agent Projects	Web vulns · OWASP · Burp Suite · Hack The Box starts
---------	--------------------------------------	--

CYBER SKILLS - OWASP Top 10 — hands on with DVWA & WebGoat - Burp Suite community — intercept, repeater, intruder - SQL injection, XSS, IDOR — practice on intentionally vulnerable apps - Start Hack The Box: 5 Starting Point machines - TryHackMe Jr Penetration Tester path - Write 3 HTB/THM writeups on GitHub	BUILD PROJECTS - Project 3 — OWASP Website Auditor AI Agent - Project 4 — Threat Intel Dashboard SaaS - Project 5 — HavelBeenPwned Domain Monitor Bot - Project 6 — SaaS URL Risk Screener (MVP) - Deploy at least one project live on Vercel	TRENDY TO TRY - Join a CTF competition (PicoCTF or CTFtime.org) - Set up Kali Linux VM and explore tools - Publish LinkedIn article on your first CVE analysis - Vibe-code a quick tool on any new AI model that drops - Start tracking bug bounty programs on HackerOne
---	--	---

Month 3	Intermediate Hacking + Portfolio Polish	Priv esc · Metasploit · 10 HTB machines · Flagship projects
---------	---	---

CYBER SKILLS - Linux & Windows privilege escalation (THM paths) - Metasploit basics on HTB machines - Password cracking: Hashcat + John the Ripper - Complete 10 HTB machines total - eJPT exam attempt or CompTIA Security+ prep - Attempt first bug bounty (HackerOne beginner scope)	BUILD PROJECTS - Project 7 — AI Log Analyzer (full-stack) - Project 8 — Real-time Threat Map SaaS - Project 9 — Portfolio site (Next.js, Vercel) - Polish all GitHub repos: screenshots, live demos, READMEs - Deploy VulnTrack as flagship (auth + billing stub)	TRENDY TO TRY - Post 'summer recap' LinkedIn thread with all projects - Hop on any trending security topic and ship a quick tool - Star and contribute to 2-3 open source security tools - Apply to 1-2 bug bounty programs - Plan next semester: CEH or OSCP prep roadmap
---	--	---

Daily Schedule

Mon	Tue	Wed	Thu	Fri	Sat	Sun
Cyber theory 6–8am	Cyber theory 6–8am	Cyber theory 6–8am	Cyber theory 6–8am	Cyber theory 6–8am	Big project sprint 9am–1pm	CTF or HTB 10–1pm
THM/HTB labs 8–11am	THM/HTB labs 8–11am	THM/HTB labs 8–11am	THM/HTB labs 8–11am	New CTF/HTB 8–11am	UI polish/deploy 2–5pm	Weak area review 2–4pm
Project build 11–2pm	Project build 11–2pm	Project build 11–2pm	Project build 11–2pm	Project build 11–2pm	GitHub+LinkedIn 5–7pm	Rest / plan week 4–6pm
Vibe coding 3–6pm	Vibe coding 3–6pm	Vibe coding 3–6pm	Vibe coding 3–6pm	Trending tech 3–5pm		
Push + review 6–8pm	Push + review 6–8pm	LinkedIn post 6–8pm	Push + review 6–8pm	Writeup + post 5–8pm		

All 13 Projects — Vibe-Coded This Summer

Security Tool 1. Network Scanner Dashboard Run Nmap from a clean web UI. Visualize open ports, services, OS detection on a polished dashboard with charts. Python · FastAPI · React · Recharts · Tailwind	AI Agent 2. AI Phishing Email Detector Paste an email → Claude API analyzes headers, links, tone and returns a threat score with explanation + highlighted red flags. Claude API · Next.js · Tailwind · Vercel	AI Agent 3. OWASP Website Auditor AI agent crawls a URL and reports OWASP Top 10 risks. Generates a scannable severity report with fix recommendations. Python · Claude API · BeautifulSoup · Next.js
SaaS 4. Threat Intel Dashboard Aggregates cybersecurity RSS feeds. Claude summarizes daily threats by category. Clean SaaS UI with topic filters. Next.js · Claude API · RSS · Supabase · Vercel	Automation 5. HavelBeenPwned Monitor Bot Enter a domain. Bot checks HIBP API on a schedule and fires Telegram + email alerts when new breaches appear. Python · HIBP API · Telegram Bot · Cron · Railway	SaaS Flagship 6. VulnTrack — URL Risk Screener Users paste a URL → AI runs security checks and returns a human-readable report. Auth, history, and shareable links. Next.js · Claude API · Auth.js · Supabase · Vercel

AI Agent

7. AI Log Analyzer

Drag & drop server logs → Claude explains anomalies, flags suspicious IPs, suggests remediations. Export report as PDF.

Claude API · Python · Next.js · pdf-lib

SaaS + UI

8. Real-time Threat Map

Live world map showing recent CVEs, active attacks by country, feed from open threat APIs. Stunning animated globe UI.

Next.js · D3.js / Globe.gl · NVD API · Vercel

SaaS

9. Password Strength Analyzer SaaS

Paste a password or a breached list. AI scores strength, explains weaknesses, suggests replacements. Beautiful minimal UI.

Next.js · Claude API · zxcvbn · Tailwind

SaaS + AI

10. AI-Powered Resume Scanner

Upload a resume → AI finds skill gaps for a chosen job role, suggests missing keywords, rates ATS compatibility.

Claude API · Next.js · pdf-lib · Tailwind

AI Tool

11. CTF Hint Assistant

Paste a CTF challenge description → AI nudges you with hints without spoiling the flag. Tracks your solved challenges.

Claude API · Next.js · Supabase · Tailwind

Automation

12. Security News Digest Bot

Daily Telegram/email digest of top cybersecurity news. Claude summarizes 10 stories in under 300 words every morning.

Python · Claude API · Telegram Bot · Cron · Railway

Frontend

13. Personal Portfolio Site

Stunning animated portfolio. Hero with particle/shader background, interactive project cards, live GitHub stats widget.

Next.js · Framer Motion · Three.js / tsParticles · Vercel

Free Resources

TryHackMe	tryhackme.com — structured paths for absolute beginners through advanced	FREE
Hack The Box	hackthebox.com — Starting Point machines, then ranked boxes	FREE
PortSwigger Academy	portswigger.net/web-security — best hands-on web hacking labs	FREE
PicoCTF	picocft.org — beginner CTF challenges, perfect for month 1	FREE
OWASP WebGoat	github.com/WebGoat — vulnerable app you run locally to practice OWASP	FREE
NetworkChuck	youtube.com/@NetworkChuck — networking & Linux explained with energy	FREE
TCM Security	youtube.com/@TCMSecurityAcademy — practical ethical hacking content	FREE
Anthropic Docs	docs.anthropic.com — Claude API docs for your AI agent projects	FREE
CTFtime.org	ctftime.org — calendar of upcoming CTF competitions worldwide	FREE
HackerOne Hacktivity	hackerone.com/hacktivity — read real disclosed bug bounty reports	FREE
0xdf Writeups	0xdf.gitlab.io — detailed HTB machine walkthroughs (after you try!)	FREE
GitHub Student Pack	education.github.com/pack — free tools, domains, credits for students	FREE
Roadmap.sh/cyber	roadmap.sh/cyber-security — visual learning path map	FREE
Vercel	vercel.com — free hosting and deployment for all your projects	FREE

End-of-Summer Targets

GitHub	■ 13 public repos pushed with clean READMEs ■ Weekly commits — no dry streaks ■ 3+ security writeups as markdown posts ■ Portfolio site live at yourdomain.com
LinkedIn	■ Month 1: First THM room writeup post ■ Month 2: Article — 'What I learned from my first CVE analysis' ■ Month 3: Thread — 'What I built in 90 days' ■ Project showcase posts with live links
Skills	■ Comfortable on Linux & Kali Linux ■ Can enumerate, scan and exploit basic web vulns ■ 10 HTB machines completed ■ Familiar with Burp Suite, Nmap, Wireshark, Metasploit

You took a gap year, figured yourself out, and came back. That already puts you ahead of most people. Now go build.
